WORKFLOW 01

01

Uploading a Pickup PDF & Creating Orders

The main daily workflow — upload your Caleo pickup list and Stoky creates the orders.

📤

Scenario: New pickup list arrived from Caleo

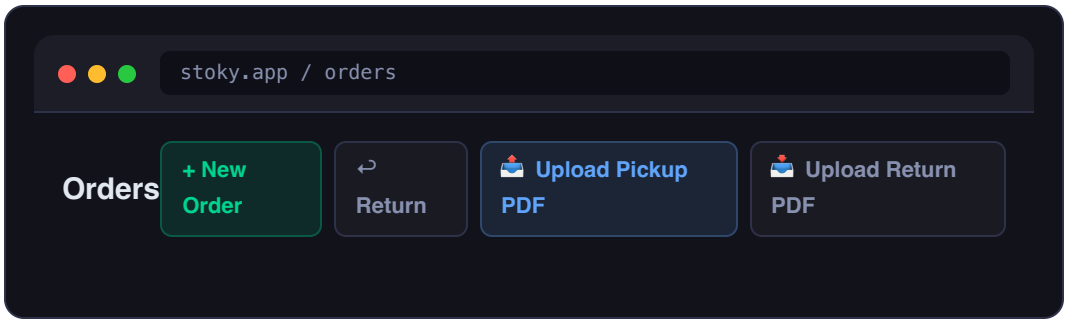
You just downloaded the pickup PDF from your Caleo dashboard. You need to register these orders in Stoky and assign products to each one.

Admin · Confirmer

1

Go to Orders → click "Upload Pickup PDF"

On the Orders page, click the blue "📤 Upload Pickup PDF" button in the top-right. A file picker opens — select your Caleo PDF file.

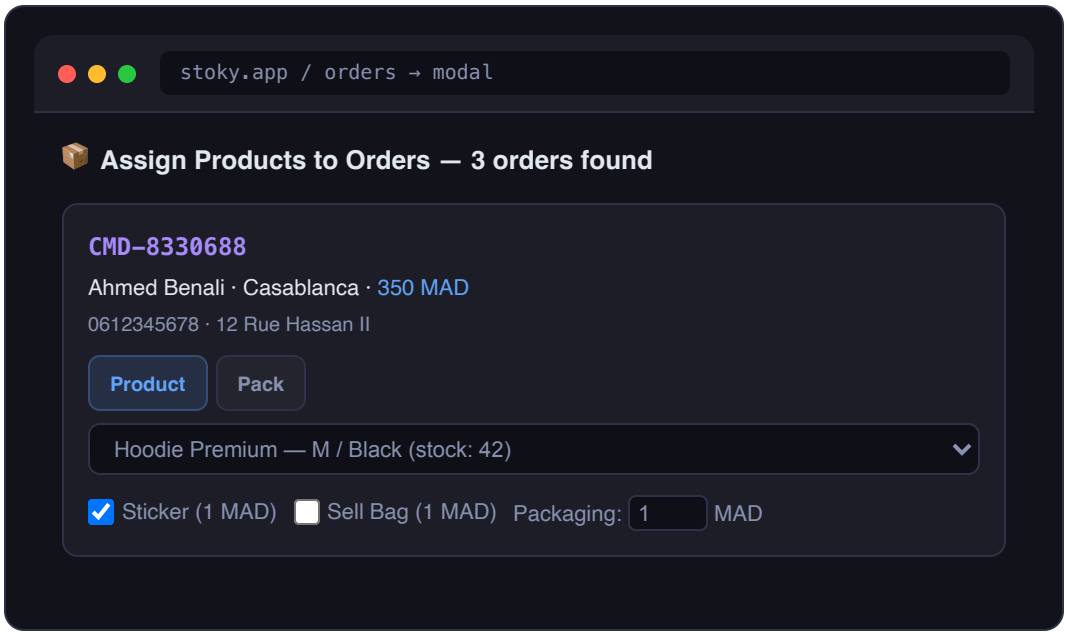


Stoky shows a "⏳ Parsing..." spinner while it reads the PDF. This takes 3–10 seconds depending on file size.

2

Stoky parses the PDF — all orders appear automatically

A modal opens listing every order Stoky found in the PDF: CMD ID, customer name, city, phone number, address, and total amount — all read automatically.



3

Assign a product (or pack) to each order

For each order, select the product variant the customer ordered from the dropdown. You can also switch to "Pack" mode and select a pack with a preset. Add multiple products per order with "+ Add Item".

> If a product is marked "Under 1kg", Stoky automatically checks the Sell Bag checkbox for that order.

4

Click "Save All Orders"

Stoky creates all orders at once. Stock is deducted from each product variant immediately. Orders appear in the main list with status "Pending".

✅ **3 orders created successfully**

Stock updated · Orders listed as Pending · Delivery fees applied per city

WORKFLOW 02

02

Processing Returns

When packages come back — either via a return PDF or manually one by one.

Scenario: Caleo sent you a return list

Some orders were not delivered. Caleo provided a return PDF listing the CMD IDs that came back. You need to process them and put the stock back.

Admin · Confirmer

1

Click "Upload Return PDF"

On the Orders page, click "📥 Upload Return PDF". Select the return PDF from Caleo. Stoky reads all the CMD IDs from it.

2

Review matched orders

Stoky matches each CMD ID in the PDF to an order in the database. Unrecognized IDs are listed in red so you can investigate.

Return modal

📥 **Process Returns — 2 matched**

CMD-8330688

Ahmed Benali · Casablanca · 350 MAD

☐ Sell Bag Returned (+1 MAD) ☐ Product Broken (broken stock)

3

Mark sell bag / broken status, then confirm

For each returned order, optionally check "Sell Bag Returned" (adds 1 MAD back to expenses) or "Product Broken" (product goes to broken stock, not back to sellable inventory).

> If "Product Broken" is checked, the item is NOT returned to available stock — it's logged in Broken Stock separately.

4

Click "Confirm Returns"

Orders are marked as "Cancelled" (returned). Stock is restored to the product variants. Capital recalculates automatically.

🔄

2 returns processed

Orders marked Cancelled · Stock restored · Capital updated

Alternative: Manual Return (one order at a time)

Click "↩ **Return Order"** button → Search by CMD ID or customer name → Select the order → Mark sell bag / broken status → Click "Confirm Return". Same result, one order at a time. Useful for single returns without a PDF.

WORKFLOW 03

03

Creating an Order Manually

Add a single order by hand — for phone orders, walk-ins, or orders not on the pickup list.

✍️

Scenario: A customer ordered by phone

Admin · Confirmer

Someone called and placed an order directly. You need to register it in Stoky manually without a PDF.

1

Click "+ New Order"

A form modal opens. Fill in the customer's information: CMD ID, name, phone, city, address, and total amount.

New Order modal

CMD ID *
CMD-999001

CUSTOMER NAME *
Sara Idrissi

PHONE
0698765432

CITY
Rabat

ADDRESS
45 Avenue Mohamed V

TOTAL AMOUNT (MAD) *
520

2

Select products and set expenses

Choose the product variant from the dropdown, set quantity. Add more products with "+ Add Product". Check sticker, sell bag, and packaging costs.

Stoky shows live stock levels next to each product so you can see availability before confirming.

3

Click "Create Order"

The order is saved with status "Pending". Stock is deducted immediately. The delivery fee is automatically applied based on the city.

✅ **Order created**

CMD-999001 · Sara Idrissi · Pending · Stock deducted

WORKFLOW 04

04 Editing an Order

Fix mistakes or update any detail on an existing order.

✏️

Scenario: Wrong product was assigned, customer changed city

Admin only

After creating the order you noticed the wrong size was selected, or the customer called to update their address and city.

1

Find the order → click the ✏ edit button

On the Orders page, find the order in the table. In the Actions column, click the pencil (✏) button. The edit modal opens pre-filled with all current order data.

2

Make your changes

Update any field: customer name, phone, city, address, total amount, products, or expenses. Change products by selecting a different variant from the dropdown.

Edit Order — CMD-8330688

CITY

Marrakech

TOTAL AMOUNT

380

PRODUCTS

Hoodie Premium — L / Black (stock: 38)

⚠ This order is **Pending** — product changes will update stock levels.

For **Pending** orders: old stock is restored, new stock is deducted. For **Delivered/Cancelled** orders: only the record is updated, stock is not touched.

3

Click "Save Changes"

All changes are saved. If the city changed, the delivery fee recalculates. If products changed on a pending order, stock is adjusted accordingly.

✅ **Order updated**

City → Marrakech · New delivery fee applied · Stock adjusted

WORKFLOW 05

05 Bulk Status Update

Update dozens of orders at once — mark them all delivered or cancelled in one click.

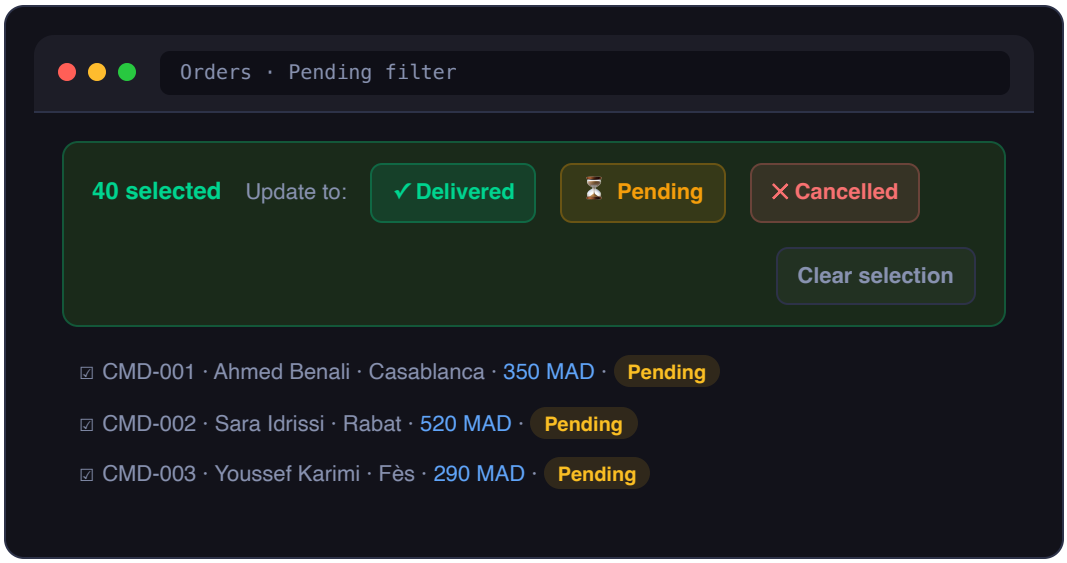
Scenario: Caleo confirmed 40 orders were delivered

Admin only

You received delivery confirmation for a batch of orders. Instead of changing status one by one, update them all at once.

1 Filter to Pending orders, then select all

Click the "Pending" filter button to show only pending orders. Then click the checkbox in the table header to select all visible orders at once.



2 Click "✓ Delivered" in the bulk action bar

All selected orders switch to "Delivered" instantly. Revenue and profit figures update across the entire app — Dashboard, Reports, everything.

✅ **40 orders updated to Delivered**

Revenue increased · Clean profit recalculated · Dashboard updated

WORKFLOW 06

06

Adding New Stock

Record new inventory when it arrives from your supplier.

Scenario: New shipment arrived from supplier

Admin only

50 Hoodies and 100 T-Shirts just arrived. You need to add them to inventory so they can be assigned to orders.

1

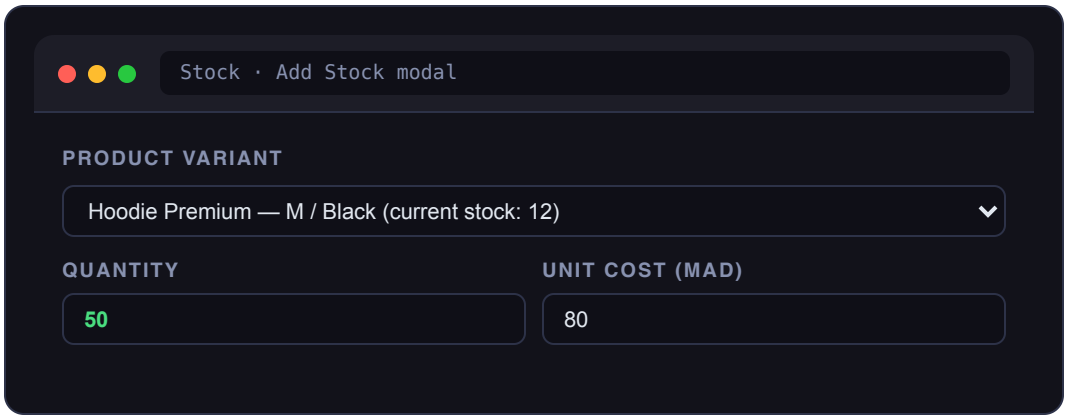
Go to Stock → click "+ Add Stock"

The Stock page shows the Arrivals tab by default. Click the "+ Add Stock" button in the top right.

2

Select variant, enter quantity and unit cost

Pick the product variant (e.g., Hoodie Premium — M / Black), enter the quantity received and the cost per unit you paid.



3

Click "Add Stock"

The quantity is added to the variant's available stock. The Stock Value in Total Capital increases by quantity × unit cost. The arrival is logged in history.

📦 **Stock updated: Hoodie M/Black — 12 → 62**

Stock Value increased by 4,000 MAD · Arrival logged in history

WORKFLOW 07

07

Adding a Team Member & Creating Their Account

Add someone to your team and give them their own login to Stoky.

Scenario: New confirmer starting today

You hired a new order confirmer. They need a Stoky account to upload pickup PDFs and track their orders.

Admin only

1

Team → click "+ Add Member"

Fill in name, role (confirmer / packer / etc.), and salary type. For a confirmer paid per order, set the rate (e.g., 5 MAD per delivered order).

Team · Add Member

NAME
Khalid Mansouri

ROLE
Confirmer

PAY TYPE
Per Order

RATE PER ORDER (MAD)
5

2

On their card, click "Account" → "Create Account"

Set a username and password for them. They can use these to log into Stoky from any device.

> Confirmers only see: Orders, Products (view), Packs (view), Stock (view), their Dashboard, and Settings. They cannot see finances, team, expenses, or reports.

3

Share credentials with them

Give them the Stoky URL, username, and password. Their activity is tracked — every order they upload is linked to their account so you can see their performance.

🔑

Account created for Khalid

Username: khalid · Can now log in · Orders linked to their profile · Earnings calculated automatically

WORKFLOW 08

08 Tracking Expenses

Log fixed monthly costs so your profit calculations stay accurate.

Scenario: Monthly expenses need to be set up

Admin only

You're setting up Stoky for the first time and want to enter all your recurring business costs so profit numbers are real.

1 Expenses → "+ Add Expense"

Enter the expense name, pick a category and type, set the amount. Click Add.

Expenses · Fixed

Name	Category	Type	Monthly Cost	Status
Shopify	Platform	Monthly	350 MAD	Active
Rent	Operations	Monthly	2,500 MAD	Active
Internet	Operations	Monthly	200 MAD	Active

Total monthly fixed cost **3,050 MAD / month**

2 These automatically reduce your Clean Profit

Every active expense is deducted from Revenue when calculating Clean Profit in the Dashboard and Reports. Toggle any expense off temporarily without deleting it.

Profit calculation updated

Clean Profit = Revenue − COGS − Team Costs − Fixed Expenses − Ad Spend

WORKFLOW 09

09 Reading Reports & Comparing Periods

Get a full financial picture and compare this month vs last month.

📊

Scenario: End of month review

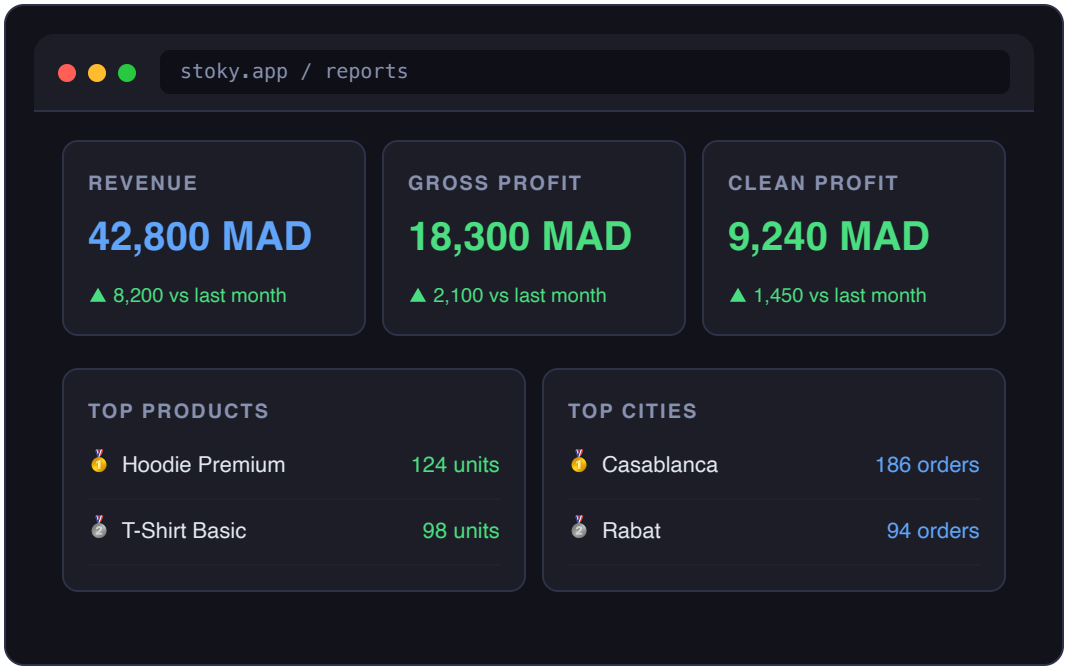
You want to see how this month performed vs last month — revenue, profit, best-selling products, and which cities ordered the most.

Admin only

1

Reports → select "This Month"

All stats update: revenue, gross profit, clean profit, total capital, cash balance, stock value. Top products and top cities also update.



2

Click "⇄ Compare" to see vs last month

Each stat now shows a ▲ or ▼ with the exact difference in MAD. Green = better than last month. Red = worse. The previous period is calculated automatically.

3

Click "🖨️ Print" to save as PDF

A browser print dialog opens. Choose "Save as PDF" to get a clean, formatted report you can send to your accountant or keep for records.

WORKFLOW 10

10 Setting Up Delivery Fees

Configure delivery and return fees per city so expenses calculate automatically on every order.

🚚

Scenario: First-time setup or new carrier fee list

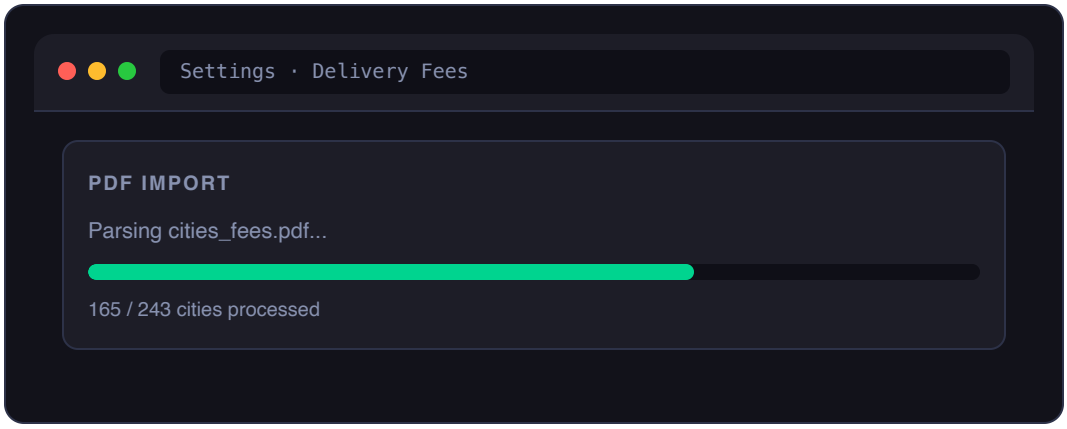
Your carrier just sent a PDF with updated delivery and return fees per city. Upload it once and Stoky will use the correct fee for every city automatically.

Admin only

1

Settings → Delivery Fees → "Upload City PDF"

Click the "📄 Upload City PDF" button and select your carrier's fee schedule PDF. A progress bar shows parsing status — this can take up to 60 seconds for large files.



2

All cities are loaded automatically

Once done, the City Management section shows every city with its delivery and return fee. You can edit individual cities or add new ones manually.

Set fallback fees for cities not in the list. These defaults are used when an order's city doesn't match any city in the table.

3

Fees apply automatically on every order

From now on, when an order is created with city "Casablanca", Stoky automatically uses that city's delivery and return fee in the expense calculation. No manual entry needed.

🗺️

243 cities configured

Correct fees apply to every new order automatically · Fallback used for unknown cities
